1 April 2021

Dear Sir or Madam,

Re: Vatan ICT

Saferworld has been working in partnership with Ukrainian company Softengi and its sub-contractor Vatan ICT on implementation of electronic crime registration system (e-crime) since April 2020. Vatan ICT has been facilitating the implementation of software development in coordination with Main Information and Analytical Directorate of Tajikistan Ministry of Internal Affairs (MIA). Vatan ICT was also responsible for setting up servers and database application for the e-crime system in country. Vatan ICT personnel are found to be competent in developing software applications and we learned they have been successfully leading on another important online education system for Ministry of Education. While implementing the e-crime system at MIA, we found the management of Vatan ICT to be responsive and responsible for the work they are committed to.

Vatan ICT is also now actively participates with our organization in the evaluation, reviewing approach and developing new system within the MIA to improve electronic system of the agency. Vatan ICT knows well the local contexts and well contributes to joint program development. In March 2021, Saferworld has completed a through due diligence of Vatan ICT finance and management system that allowed us to directly work with them on contracts for further development of the IT systems. This lead to signing contract with them for more than \$60,000 for provision of IT equipment and training of police personnel on the new e-crime system.

I feel confident recommending a partnership with Vatan ICT in promoting the development of information system reforms and developments for improved quality of work within Tajikistan government agencies.

Vatan ICT key staff members are responsive, open for new ideas, and willing to improve IT system in Tajikistan.

If you have any further questions, please feel free to contact me.

Yours sincerely

Khirad Kargasov
Saferworld Project Manager
